

- Power BI walkthrough recap

Building the Power BI sales dashboard

Every step I followed, from raw data to a published, shareable report.

01 Import & clean the data

- 📄 Imported the invoice file into Power Query
 - Formatted sales as currency, merged date columns
 - Imported and cleaned the customer master file
- 📊 Loaded both queries into the data model

02 Set up data relationships

- Verified the auto-detected table relationship
- 🔗 Linked customer ID to customer code
 - Reviewed how to connect tables manually

03 Build visuals & slicers

- 📊 Built a clustered bar chart of sales by category
- 📄 Added a dropdown slicer to filter by year
 - Formatted data labels, titles, and bar colors

04 Add time intelligence

- Built a table of monthly sales values
- 📈 Added a year-over-year change quick measure
- 📅 Added a year-to-date total quick measure

05 Map data & cross-filter

- 📍 Mapped sales by province
 - Demonstrated cross-filtering across visuals
- 📈 Added a line chart and a KPI card

06 Save, publish & share

- Saved and renamed the finished report
- 📄 Published the report to the Power BI service
- 🔗 Shared it and embedded it as a tab in Teams
